

## toner stocking program

### what is the toner stocking program?

It's a service where Loop maintains an inventory of toner cartridges at your location on a consignment basis so you don't have to worry about running out of toner and interrupting your workflow.

### who maintains the inventory?

A Loop representative visits your location on a regular basis to monitor usage. You are then invoiced for the toner cartridges that have been consumed and the inventory is replenished.

### what are the benefits?

Aside from always having a supply of toner onsite and available, you also benefit from Loop's volume pricing even though you only pay for what you use, when you use it. You also reduce the administrative costs associated with ordering toner supplies since Loop does this for you.

### why should I choose Loop?

Loop understands how critical a situation can become when you suddenly run out of toner and have no alternate resource to get your workflow back up and running. These are the "little things" that people tend to forget about. Loop doesn't!
